- P2P setting
- Remote veiwing
- Memory Card: Up to 32GB
- Android & iOS Compatible
- Windows & Mac OS X Compatible
- APP Name Kalay

If 6-8 hours of battery life isn't long enough for your newly created hidden camera then we recommend the DIY120EB kit. It includes an auxiliary battery to extend your hidden video recording for up to 40 hours.

Note: This is a battery operated device. If the area in which the DIY20 is installed sees a lot of activity, causing the camera to power on and off frequently, your battery will run down quickly. Battery Operated Cameras are extremely convenient, portable and have endless adaptability. However, depending on the operation, traffic and timeframe an auxiliary battery will most likely be needed to stay operational for longer periods of time. The rechargeable auxiliary battery pack + USB adapter (DIY120EB purchased separately) produces up to 40 Hours of continuous recording for the wireless hidden camera system.
